Grinding and mixing plant

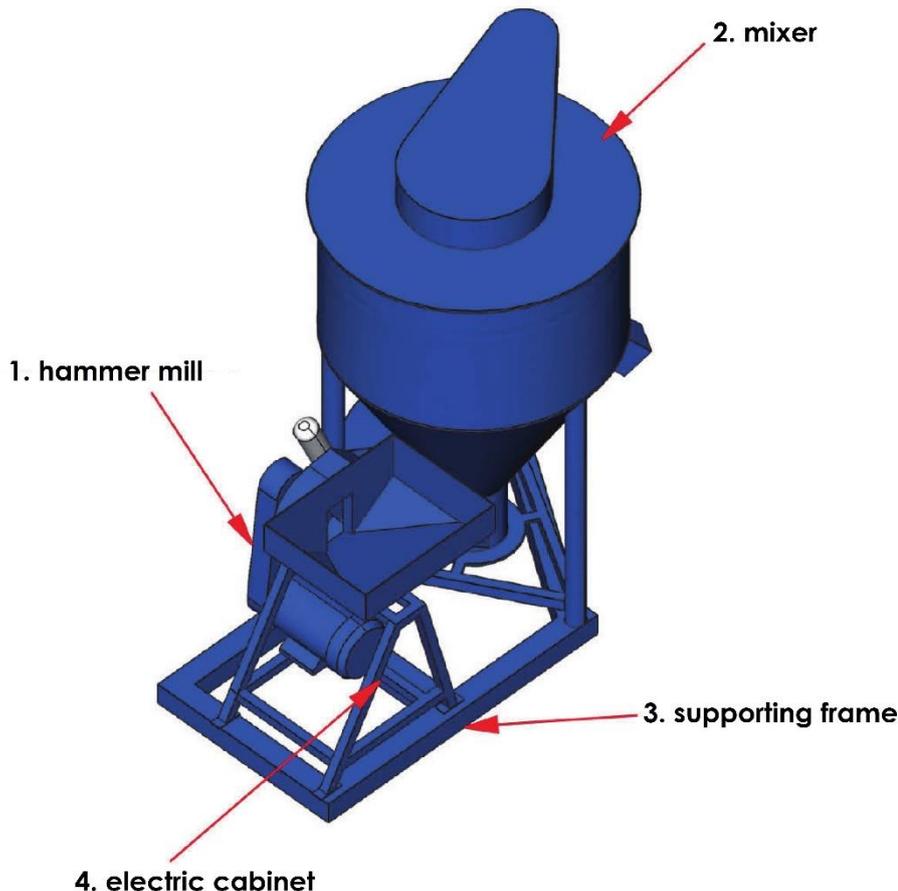

KPM 75

The compact plant KPM 75 is the optimal solution for the production of animal feed. The facility is equipped with a powerful hammer mill (1). The ground material is supplied via a feed hopper of the mill. The supplying is directly adjustable about a hand slide. The feed hopper can be loaded manually or via conveyor systems. The ground products are conducted by the mill directly into the mixer without any additional conveyor system. Due to the very precise mixing of the individual products in the mixer you get a high-quality mix. In addition, other products can be added directly into the mixer through the hand-adding hopper. After the required mixing time of the mixer, the mixer will be emptied over the side shift.

The mill and the mixer is started with the electric control. The current consumption of the mill can be regulated over the built-in ammeter. You can do this with hand slider. The support frame beneath the machine can be equipped with a weighing system for precise targeting.

The advantages:

- compact design
- turnkey delivery / immediately usable / no assembly required
- powerful

	drive power KW	volume capacity liter	power Kg/h
Mill	7,5 bis 11		500-2000
Mixer	2,2 bis 3	900 bis 3640	

- Agricultural technology
- Plant Construction
- Engineering
